proudly presents:

## Krita: Beyond Painting

**A look at digital painting and editing**

Explorit Science Center, 5<sup>th</sup> Street Davis

7pm on 18<sup>th</sup> February 2019

Krita is an open-source program designed for digital artists, animators and designers. Come to our demonstration of the programs tools and interface, and see how it's used for tasks from conception and painting to photo editing.

Its unique "heads-up display" palette toolbar is a remarkable piece of interface design and lends itself to many versatile and ingenious uses in many fields, but especially valuable with graphics tablets.

The demonstration is open to all who are interested in original art and graphic editing.
